Data Providers

A *Data Provider* is a user (representing for example an institution) willing to contribute with his own data or with a novel service.

The registration process for data providers is supervised by an InGeoCloudS administrator who must check and authorize the *Data Provider* account request. For that, please send an email to contact [at] ingeoclouds[dot]eu

The platform creates a *Workspace* for each *Data Provider*. A *Workspace* simply provides the possibility to store (and access) his own data in a private database of the InGeoCloudS Elastic Database Server, and/or in a private folder of the InGeoCLOUDS Elastic File Server.

Data Providers Documentation

The documentation covers following topics:

- How to register in InGeoCloudS as a data provider
- Description of options and available services for data providers: prerogatives, typical usage scenarios, the *Data Providers Toolkit*
- Description of a data provider's workspace (database and file-system access)
- How to use GeoPublication service to upload own data, create maps and produce catalogues and WMS / WFS links to the data.
- How to use Linked Open Data Services
- How to map one's own data model to GSOM (Geo-Scientific Observation Model) and INSPIRE.
