[Application Providers Documentation](#) [1]

This section will include documentation on how an application provider can use the InGeoCloudS platform to deploy a new application. It will cover the following topics:

- **InGeoCloudS API.** Technical description of the API functions along with examples on how to access the various InGeoCloudS components. Detailed instructions on how to integrate a new application using the API.
- **Elastic Compute Service.** Guidelines to create and manage a new Elastic Compute instance. How to access and use the Amazon Console and what is the provided functionality.
- **InGeoCloudS Portal.** How to use the InGeoCloudS portal to integrate the application front-end.
- **Default GIS Client.** How to use the default GIS client to provide a mapping access to the geo-datasets.
- **Monitoring and Billing Service.** How to monitor usage of cloud resources and their respective charges.
