

InGeoCloudS Experts Workshop

Moving Geodata and services to the cloud: exchanges about use cases and challenges

2nd Session

About this Workshop

2nd Session

Our Expectations from the Workshop

We need to assess

- whether our use cases are relevant and whether cloud technology and all surrounding practices are relevant for them (the use cases).
- whether a data semantics-axed methodologies/approaches are relevant

We need to get opinions and returns of experience about your projects, your operations, your exploitation of data and services.

2nd Session

Exploitation of Workshop results

We might elaborate

- Use case variants, addressing needs for new services, for improved interoperability of services and data
- Project Pilots scope revisited

We would like to keep the communication channel

- Regular information exchanges,
- notices about the project's progress about your own case studies when applicable.

Open discussions

A large part of the workshop time is dedicated to round tables for open, interactive and cooperative discussions.

These discussions shall reflect on the general presentations conducted before.

Day 1 : Cloud Computing paradigm and INSPIRE

Day2: Hydreology and GeoHazards use cases +

Conclusions and prioritisation of actions/synergies.
